

KRANOMINA GMW/P

Product Information

Synthetic oils with selected cationic agents

Chemical and physical characteristics

Appearance : white paste
Ionicity : cationic
Active Principle : blend of synthetic oils with selected cationic agents
pH solution 10% : about 3 - 4
Active Contents : 23% ± 2%
Solubility : soluble in water
Light Solidity : good
Storage Stability : at ambient temperature the product is durable 9 months

Characteristics

KRANOMINA GMW/P gives leathers a light greasy superficial touch.

After an anionic fatliquor **KRANOMINA GMW/P** gives a velvety feel, without affecting further finishing operations.

To increase the intensity of the black color or other colors, after having added formic acid, in the same bath to add 2% of **KRANOMINA GMW/P** and rotate for 30 minutes; after for the black add the basic black for the leather nappe, or suede add the other color dose. You get a good result.
